Hiring Manager
Moniepoint Group

Dear Hiring Manager,

I'm writing to express my keen interest in the Senior Backend Engineer (Java) position at Moniepoint Group. With over six years of experience in backend development, primarily using Java and Spring Boot, I am eager to contribute to Moniepoint's mission of redefining financial services in emerging markets.

In my current role as a Senior Software Engineer at Infosys Limited, I work on the Arena product for Truist Financial Corp., a data operations platform. My responsibilities include:

- Developing core services for secure secrets storage using HashiCorp Vault.
- Migrating legacy Hibernate implementations to JPA, aligning with Spring Boot 3 standards.
- Enhancing code reliability by addressing SonarQube-reported issues, achieving a reliability score of 'A'.
- Mentoring junior team members, fostering knowledge sharing and collaboration.

Previously at Zaloni Technologies, I:

- Enhanced password encryption mechanisms, bolstering database security.
- Integrated ServiceNow approval gates into data provisioning workflows.
- Upgraded Spark-based actions to Apache Spark 3 and facilitated Azure Databricks integrations.

Moniepoint's emphasis on scalable microservices, cloud-native architectures, and a culture of innovation resonates with my professional aspirations. I am particularly drawn to your use of technologies like Docker, Kubernetes, PostgreSQL, DynamoDB, and AWS, as they align with my experience and areas of interest.

I am enthusiastic about the opportunity to apply my skills in a fintech environment and contribute to Moniepoint's continued success. Thank you for considering my application. I look forward to the possibility of discussing how my background can benefit your team.

Sincerely,
Samim Aftab Ahmed
